Black Ice Printer Driver version 16.55 with the with editable/predefined graphic resolutions is now available!

Many specialized applications require very highly specific resolutions (DPI) that ordinary printers do not support. The latest Printer Drivers greatly reduces the number of clicks to set the desired or required graphic resolution. This feature also allows Administrators to remove unwanted printing resolutions like fax resolution where faxing is not in use, helping to prevent any confusion with end users.

On the Device Settings Tab of the Black Ice Printer Drivers, Administrator or users can now edit or

create a custom pre-defined default graphic printing resolution (DPI) lists that shown for the users. Also, through the MSI installer, system administrators can preconfigure available printing resolution (DPI) for every user during deployment.

The complete list of improvements in the latest Printer Driver includes the following:

DATE: 05-14-2021

Version: 16.55 (revision: 2665)

- Added options for setting the list of resolutions on the user interface or in the INI file (#13133)
- Faster printing for image formats (#13862)
- Minor user interface improvements (#13866, #13967)
- Stability improvement for PDF encryption where PDF files could not be opened when some specific passwords where used (#13987)
- Updated PDF DLLs to version 3.1.6.725
- Updated manuals
