Black Ice Software's latest release of the Printer Driver Version 16.94 includes significant improvements including an **updated Tesseract OCR**, Windows 11 MSIX applications stability improvement as well as improved Event Logging for simplified troubleshooting.

- Updated **Tesseract OCR** engine to version 5.1, which provides **more accurate recognition** of OCR data on documents and **faster performance**. In addition, the updated Tesseract OCR engine includes countless bug fixes.
- Fixed issues where **Windows 11 MSIX applications** and some more advanced features in the Printer Driver were not working. Windows 11 comes with new MSIX package applications such as Notepad and Paint that are executed in an isolated "sandbox." This had previously created problems when using some of the features of the black ice printer such as Start Application", "Save As", or uploading to Database, FTP, HTTPS, MFiles, and SharePoint. This has all been resolved in the latest release.
- **Added** additional **Event Logging** to simplify **troubleshooting** for circumstances that involve the Email Sender or the Database, FTP, HTTPS, MFiles, or SharePoint uploader.
The Database, FTP, HTTPS, MFiles, or SharePoint uploader is available only in the X1 virtual printer drivers.
